

JUICES, NECTARS, DRINKS  
SYSTEM SOLUTIONS FOR HORECA

# COMPANY

Belfood is a young, Polish family company with wide experience in the food industry. Our mission is to create innovative food products, which meet the expectations of a modern consumer. Transparency, partnership and trust – the motto of each of our activities.

## PRODUCTS

Professional system  
solutions for HORECA

The system offer ensures access to the best quality products: concentrates (Premix, Postmix), a large selection of equipment support (from simple jugs to advanced equipment POSTMIX), training and service. These three inseparable elements are the pillars of the PURENA brand.

**Estimate your business and needs, so we can offer the best, proven solutions to you!**

# JUICE, NECTAR, DRINK DEFINITIONS

There are many different products on the market that contain juice. A transparent classification is important to distinguish individual products, e.g. juices from drinks.

## 1 JUICE

Made solely from fruits or vegetables, 100% e.g. from fruits and vegetables content. Can be made from concentrated juices (concentrates) or pressed directly (NFC: *not from concentrate*).

**ALLOWED:** adding fruit flesh and purée, enriching with the vitamins and mineral salts.

**BANNED:** adding colorants, sweeteners, preservatives, adding any sugars.

### THERE ARE NO JUICES:

- WITH ADDED SUGAR
- WITH AN ADDITION OF PRESERVATIVES
- WITH LESS THAN 100% FRUITS

## 2 NECTAR

Contains from 25 to <100% juice or fruit purée. Made by adding water and sugar and/or honey and occasionally citric acid to fruit juice/purée.

**ALLOWED:** adding sweeteners to "light" nectars.

**BANNED:** adding colorants, preservatives.

## 3 DRINK

**ALLOWED:** chemically preserved, using colorants, artificial flavourings, sweeteners, thickeners and other components, which aromatise and add flavour, but can be also used to enhance the drink.

If we add a prohibited ingredient such as preservative to the product even with a high content of juice, then such a product can be called only a beverage.

## PASTEURIZATION

One of the oldest and widespread methods of food preservation is pasteurization, i.e. high temperature impact (about 90°C). Our mothers and grandmothers know how to use it while preparing home-made jams, compotes and other preserves. During the pasteurization, bacteria and other microbes unfavorable to human health are destroyed, preserving taste and nutritional values. With the advance of the civilization, man discovered preservatives such as sodium benzoate or potassium sorbate.

We respect civilization achievements but we trust in nature – that's why we do not use preservatives in our products. Our products are pasteurized and packed in aseptic (clean) technology.

## THREE METHODS OF SERVING JUICES IN GASTRONOMY

1

### READY TO DRINK NFC – DIRECTLY PRESSED JUICE (NOT FROM CONCENTRATE)

Juices are served directly from cooling beverage dispenser (or pitchers or carafes) to guest's glass.

2

### PREMIX

Products are offered as a concentrate which should be manually diluted with water in appropriate proportions, then poured into the pitchers, carafes or cooling appliances (breakfast dispensers).

3

### POSTMIX

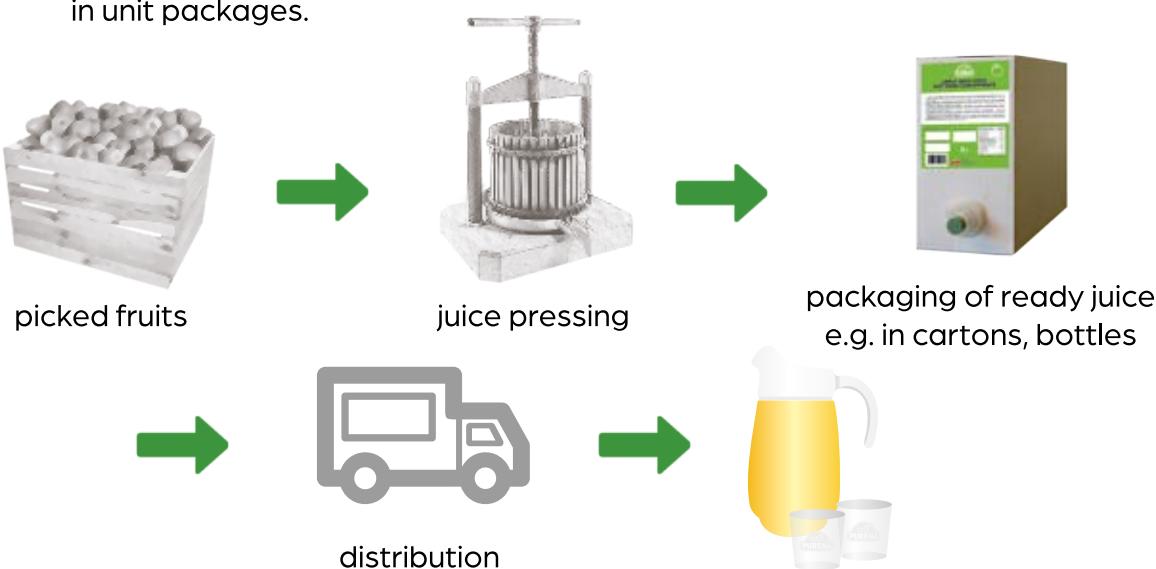

Concentrates are diluted in right proportion automatically by continuous mixing, flowing right into customer's glass.

1

## JUICES DIRECTLY PRESSED – THE BAG IN BOX PACKAGING

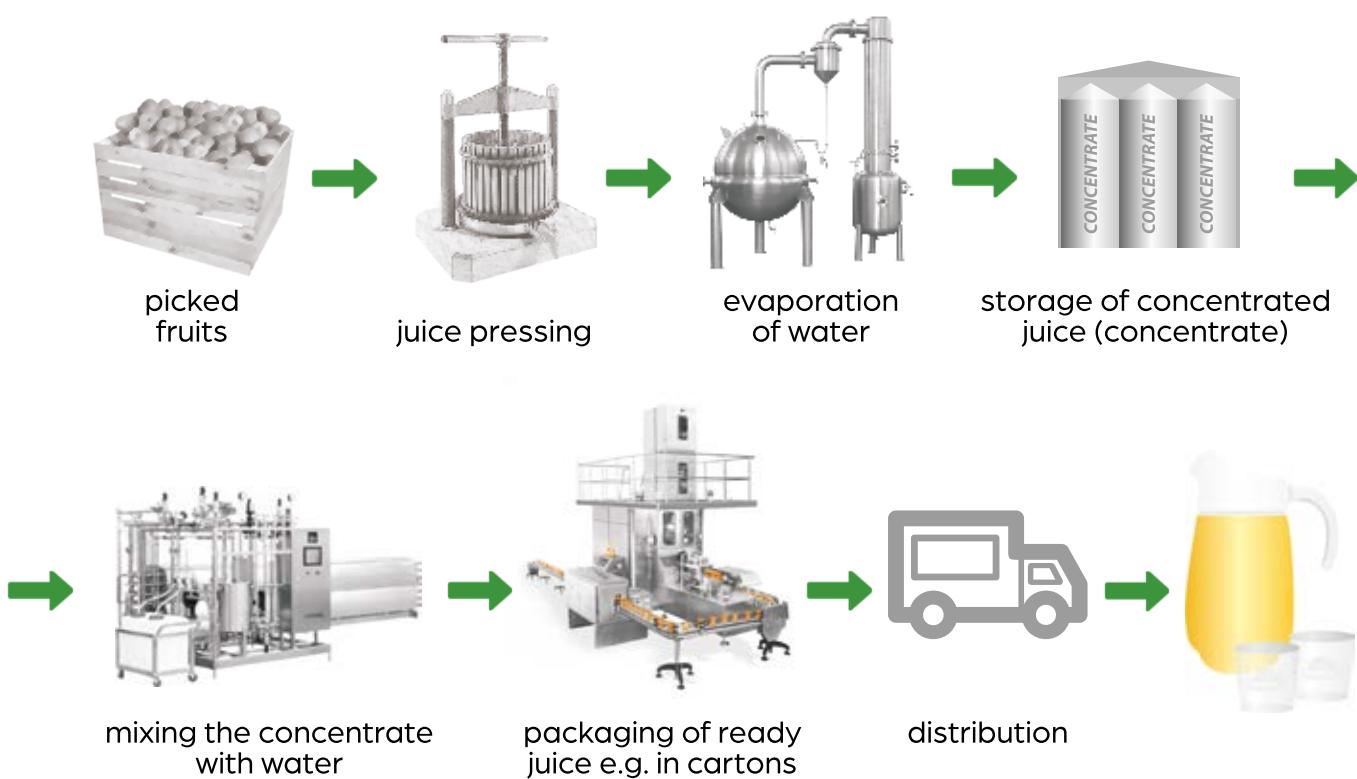

"not from concentrate" NFC: pressed, pasteurized (or not) and packed in unit packages.

2

## JUICES FROM CONCENTRATES FOR HORECA

fruits pressed, concentrated by evaporation of water to concentrate juice and then after transfer to the factory/country of consumption, reconstituted with water to the original form (with the same amount of water as it was originally evaporated), pasteurized and packed in the unit packaging.

**3**

## JUICES FROM CONCENTRATES – PURENA IN A FORM THAT CAN BE RECONSTITUTED

fruits pressed to juice form, then concentrated by evaporation of water to concentrated juice form. Products are packed in unit packages, pasteurized and then distributed to consumer who reconstitute them with water to the original form (with the same amount of water as it was originally evaporated). Reconstitution takes place directly in a hotel, cafeteria or restaurant.
